

ACCESS CONTROL POINTS & SECURITY FACILITIES

FEDERAL AND DEFENSE

CoverSix designs and manufactures custom security facilities. Our buildings not only provide protection for security personnel and guards by being hardened against blasts, ballistics, and forced entry, they provide a functional space to perform security operations. CoverSix can design scalable facilities for a variety of uses, like guard shacks, access control points, overwatch towers, visitor centers, entry control points, or security offices. We can meet your facility's requirements for functionality and physical deterrence.

CoverSix guard shacks and security offices provide amenities to include windows, HVAC, work surfaces, data outlets. They can be engineered to provide protection from explosives and ballistics.

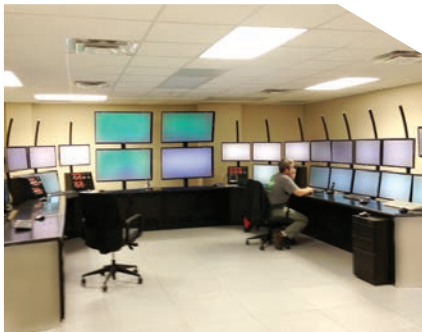

CoverSix can design and construct modular security facilities with a variety of facades and finishes to match existing architecture or create first in class aesthetics.

Access Control Points are not limited in size or scope. Multi-section facilities can be over 10,000 sqft and include kitchens, restrooms, and locker rooms in addition to the security office environment.

CoverSix's security capabilities include turnstile modules which are single turnstiles mounted inside of an all-steel frame to provide scalable access control and prevent piggybacking.

CoverSix buildings are a safe and secure location to conduct security operations. Buildings designed for surveillance, screening, permitting, training and administrative functions.

The Fixed Fighting Position (FFP) is ballistic resistant, weather-protected, and designed to house two machine gunnery personnel with 1 floor-mounted machine gun
